

KEVIN ATKINSON

AI Agent Platform Architect | LLM Orchestration & Agentic Systems

Seattle, WA, USA | (716) 545-4614 | [linkedin.com/in/atkinsonkevin](https://www.linkedin.com/in/atkinsonkevin) | github.com/wasabikev

Open to Senior Engineer, AI Platform Engineer & Full-Stack Engineer roles - Remote

PROFESSIONAL SUMMARY

AI platform architect and full-stack engineer with 20+ years in enterprise technology and a deliberate, hands-on pivot into production LLM and agentic systems. I specialize in the unglamorous infrastructure that makes AI dependable at scale - multi-tenant orchestration, async pipelines for long-running agents, RAG, persistent agent memory, and multi-provider LLM routing. Backend-heavy with strong React/TypeScript delivery and a compliance-first mindset shaped by years in regulated financial environments. A quiet, ship-focused builder who mentors teammates, partners closely across functions, and keeps self-teaching across the fast-moving LLM stack.

CORE SKILLS

AI / LLM Orchestration: Multi-provider routing (OpenAI GPT, Anthropic Claude, Google Gemini, Cerebras), intelligent fallbacks, cost optimization, agent memory, evidence-based responses with citation tracking

RAG & Document Intelligence: Pinecone vector DB, retrieval-augmented generation, intelligent document processing (PDF / Excel / Word + OCR)

Backend: Python (Quart async Flask, SQLAlchemy 2.0), Redis-backed task queues, async task orchestration, REST & WebSocket APIs

Frontend: React 18, TypeScript, TanStack Query, Fluent UI, real-time WebSocket interfaces

Data & Storage: PostgreSQL (Itree + FTS5), Redis, S3-compatible storage

Infrastructure & DevOps: DigitalOcean App Platform, AWS, Docker, Alembic migrations, secrets management, auto-scaling, monitoring

Architecture: Multi-tenant SaaS, complete data isolation, role-based access control (RBAC), distributed systems, zero-downtime backup/restore

Practices & Leadership: Security & compliance, audit logging, technical mentorship, cross-functional collaboration

PROFESSIONAL EXPERIENCE

AI Agent Platform Architect & Founder - Asgard Systems AI

Seattle, WA (Remote) | Late 2024 - Present

- Founded Asgard Systems AI to design and ship enterprise-grade AI orchestration platforms, carrying production LLM and agentic systems from architecture through deployment.
- Architected and delivered a full-stack, multi-tenant SaaS platform for a financial services client, owning everything from Python (Quart + SQLAlchemy 2.0) services to a React 18 / TypeScript interface.
- Engineered async task orchestration on Redis-backed queues that sustains 20+ minute LLM sessions without HTTP timeouts, removing a long-standing reliability ceiling for long-running agents.
- Built persistent agent memory with cross-session knowledge retention and topic-based organization, enabling evidence-based reasoning and traceable, citation-backed answers.
- Designed a multi-tenant architecture with complete data isolation and a 5-tier role-based access control (RBAC) model to meet regulated-industry requirements.
- Implemented multi-provider LLM routing across OpenAI GPT, Anthropic Claude, Google Gemini, and Cerebras, layering in intelligent fallbacks and cost optimization for resilient, budget-aware inference.
- Developed RAG pipelines on Pinecone vector DB with intelligent document processing (PDF / Excel / Word + OCR) to produce accurate, source-cited responses.

- Migrated production infrastructure from AWS to DigitalOcean App Platform, cutting hosting costs by 60% while preserving auto-scaling and monitoring.
- Hardened the platform with comprehensive audit logging, compliance features, real-time collaboration, and zero-downtime backup/restore.

Director of Technology & Operations - HKP Advisors (Hagen, Kurth, Perman)

Seattle, WA | 2006 - Late 2024

- Directed technology and operations for nearly 19 years at a Seattle-based CPA and professional services firm, building and maintaining secure, compliant systems for regulated financial environments.
- Translated complex business requirements into reliable production systems in close partnership with firm leadership and cross-functional teams.
- Led and mentored technical staff while advancing scalable web applications, distributed systems, and compliance-driven financial-services technology.

Assistant Director of Technology - The Art Institutes

2005 - 2006

- Supported technology leadership and operations in the higher-education sector, helping maintain core infrastructure and day-to-day systems.

COMMUNITY & OPEN SOURCE

Seattle AI Tinkerers - Active Member

- Demoed "AI ∞ UI," an LLM orchestration tool built largely with AI-generated code, to the local builder community.

GitHub - github.com/wasabikev (AsgardSystemsAI organization)

- Maintains a deliberately minimal public profile; production AI work lives in private repositories under client confidentiality.

EDUCATION

Master of Business Administration (MBA)

Specialization: Information Technology Management

Bachelor of Science (B.S.), Computer Science

1999 - 2001
