

DESHAWN WILSON

AI Prompt & Data Pipeline Engineer | LLM Systems · RAG · Synthetic Data · LLM Evaluation

Austin, TX (Remote) | deshawnwilson.ai | GitHub: github.com/deshawnwilson-ai

Full LinkedIn profile available upon request

PROFESSIONAL SUMMARY

AI Prompt & Data Pipeline Engineer with 4+ years building reliable, production-grade LLM systems. I specialize in prompt engineering, synthetic data generation, RAG optimization, and evaluation frameworks that hold up under real-world load. My path runs from a university research lab in Houston, through solo open-source work, to a full-time role at Aether Intelligence. The throughline is simple: make generative AI dependable, measurable, and bias-resistant.

PROFESSIONAL EXPERIENCE

AI Prompt Engineer & Senior Data Pipeline Specialist

Aether Intelligence (Enterprise LLM infrastructure startup) | Austin, TX (Remote)

Feb 2024 - Present (2+ years)

- Architected PromptForge v2, an evaluation suite now relied on internally by three Fortune 500 clients; the rollout reduced measured hallucination rates by 41%.
- Designed and shipped end-to-end synthetic data pipelines that produced 500k+ high-quality training examples for fine-tuning, pairing LangChain with custom evaluators.
- Led a RAG retrieval optimization initiative for a legal-domain client, lifting precision@10 by 28%.
- Partnered with client engineering teams across the project lifecycle and mentored two junior engineers on evaluation methodology and prompt-versioning practice.
- Tools: Python, LangChain/LlamaIndex, Pinecone/Weaviate, Hugging Face, OpenAI/Anthropic APIs, Weights & Biases, GitHub Actions CI/CD.

Founding AI Engineer & Prompt Lead

PromptForge (solo to micro-startup; assets acquired into Aether) | Remote

Jun 2022 - Jan 2024

- Launched the open-source PromptForge repository, which has since grown to 850+ stars and an active contributor community.
- Delivered 12 client prompt-audits across edtech and fintech, with an average reported ROI of 3.2x.
- Grew the project from a personal experiment into acquirable assets, maintaining clean documentation and test coverage throughout.

Junior Data Analyst to AI Tools Developer

Houston Dynamics Lab (university-affiliated AI research group) | Houston, TX

Jan 2019 - May 2022

- Developed early data annotation tooling that was adopted across three published research papers.
- Collaborated closely with graduate researchers, translating evolving experimental needs into practical, reusable tooling.

EDUCATION

B.S. Computer Science | University of Houston | 2018

Thesis: "Prompt Pattern Optimization for Low-Resource Fine-Tuning"

GPA 3.7 | Dean's List (4 semesters) | Coursework: Machine Learning, NLP, Databases, Software Engineering

SKILLS SNAPSHOT

Expert: Prompt Engineering, RAG, Synthetic Data Generation, LLM Evaluation, Python, LangChain

Proficient: SQL, Vector Databases (Pinecone, Weaviate), Hugging Face, Git, Docker, AWS/GCP

Additional: Technical Writing, Client Workshops, Open-Source Maintenance, Cross-Functional Collaboration
